How Does Stormwater Affect the Industry?

Colorado Department of Public Health & Environment has instituted National Pollution Discharge Elimination System Regulations for disturbance activities associated with the oil & gas and construction industries. In addition, the Clean Water Act requires all facilities to minimize sediment from leaving sites of one acre or more. These changing regulations have led to stricter fines and enforcement from the EPA and the CDPHE. Over the course of two days, we will discuss the consequences of not controlling Stormwater runoff and will provide you with the comprehensive information that will assist in compliance.

The **Buys & Associates'** Stormwater and Erosion control philosophy is simple: Streamline the process, comply with regulations and help the client succeed. Because of our "hands-on" approach, our firm is able to see the big picture; We know the players, the gatekeepers, and the trends associated with stormwater, and proudly stand behind the quality of our work.

Watersaver operates on the same principal, providing their clients with quality products and services, and has been a leader in the environmental industry for over fifty years. With a complete line of evaporation control, mosquito control, erosion control and commercial roofing products, Watersaver takes pride in their work by providing the highest quality products and services every time, on-time.

John A. Jehn, P.G.

John A. Jehn heads the Stormwater Management, Quality Assurance and Quality Control group at Buys & Associates. He is a geologist with twenty years experience in the fields of construction, remediation, geotechnical, and environmental sciences.
